Flame Sensor Trane Xe 90

#3 as stated, flame sensor is new. The flame cuts out so fast that there is not enough time for the flame sensor to react. The farthest burner where the flame sensor lays has not even ignited yet. We are talking tenths of a second to 1 second for the blow out. #4 No codes, slow steady flashing when the furnace is idle.

Trane xe 90 flame sensor or what (again)

Make : Trane Model : XE90 Already Tried: I have shut down the furnace and gone through the start-up procedure. The burners light and the blower is running, but the furnace fails to fully ignite. I found the sensor wire, but do not know how to access the sensor itself. Can't find an external access point on the burner section.

How to access the Trane XE90 furnace flame sensor?

The thermocouple or flame sensor is a small metallic device positioned in the flame path of the pilot light. When the pilot flame is lit, the thermocouple sends a signal to the electronic control board or gas valve indicating that the pilot is lit and that it's safe to open the gas valve for flame ignition. ...
