Recent projects on serialization and track and trace help illustrate the concepts of vertical and horizontal integration. With vertical integration, the unique product identification information (serial number, lot, etc.) used by sensors and printers on the packaging lines is made accessible to the supply chain and regulatory hubs throughout the entire technology stack.

**Achieving Vertical & Horizontal Integration in Pharma 4.0 ...**  
Serialization and traceability programs require new software, hardware, and processes to identify, track, and share information—and this can be expensive. "One important equipment issue is that the format of the data matrix can only be read by camera or an image-based scanner, not a red-laser scanner," said Davison.
